

- Existing 3G Dual-band Coverage***
 3G Mobile Voice
 HSDPA Data
 Mobile Broadband
- Existing 3G Dual-band Coverage* with External Antenna**
- Future 3G 900MHz Coverage#**
 (by June 2010)

*Coverage is dependant on a dual-band 3G 900MHz/2100MHz device.

Visit www.acnpacific.com.au/3Gdualband to view a range of dual-band 3G handsets for use in 900MHz/2100MHz locations.

Outside dual-band 3G areas, you will require a device capable of accessing GSM 900MHz.

#Planned dates are indicative only and subject to change.

Handset quality or local conditions may prevent or interfere with mobile reception within coverage areas e.g. inside concrete buildings, lift wells, basements, tunnels and road cuttings. High rise buildings may also suffer degradation of service. These maps are not an indication of in-building coverage.
